PARSING EXPRESSION GRAMMARS

PARSING EXPRESSION GRAMMARS

MOTIVATION, DEFINITION, EXAMPLES

PRACTICAL MOTIVATION

Classical Parsing Approaches

- Top-Down: $LL(k)$
easy to design, but the power is limited
- Bottom-Up: $LR(k)$
powerful (generate all DCFLs), but hard to design

Parsing Expression Grammars

- PEGs can be considered as a generalization of LL-grammars
- PEGs are more powerful than LR-grammars, but there is no (currently?) direct translation LR-grammars to PEGs
- PEGs now being used in compilers
Python replaced $LL(1)$ -parser by PEG
- PEGs are popular for solving parsing problems

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$

$$B \rightarrow abb \mid b$$

$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(k)-GENERALIZATION

S

LL(1)-Grammar:

$S \rightarrow BC$

$B \rightarrow abb \mid b$

$C \rightarrow cC \mid \varepsilon$

PEGS AS $LL(k)$ -GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$
$$B \rightarrow abb \mid b$$
$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$S \rightarrow BC$

$B \rightarrow abb \mid b$

$C \rightarrow cC \mid \varepsilon$

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$

$$B \rightarrow abb \mid b$$

$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$
$$B \rightarrow abb \mid b$$
$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$

$$B \rightarrow abb \mid b$$

$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(*k*)-GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$
$$B \rightarrow abb \mid b$$
$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$$S \rightarrow BC$$

$$B \rightarrow abb \mid b$$

$$C \rightarrow cC \mid \varepsilon$$

PEGS AS LL(k)-GENERALIZATION

LL(1)-Grammar:

$S \rightarrow BC$

$B \rightarrow abb \mid b$

$C \rightarrow cC \mid \varepsilon$

PEGs AS LL(k)-GENERALIZATION

CFG

$S \rightarrow AB \mid BC$

$A \rightarrow aA \mid a$

$B \rightarrow abb \mid b$

$C \rightarrow cC \mid \varepsilon$

PEG

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

S

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGs AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \epsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / b$

$C \leftarrow cC / \varepsilon$

PEGS AS LL(k)-GENERALIZATION

PEG:

$S \leftarrow AB / BC$

$A \leftarrow aA / a$

$B \leftarrow abb / \underline{b}$

$C \leftarrow cC / \varepsilon$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \varepsilon$$

$$A' \leftarrow aA' / \varepsilon$$

$$B \leftarrow bBc / \varepsilon$$

$$D \leftarrow dD / \varepsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \epsilon$$

$$A' \leftarrow aA' / \epsilon$$

$$B \leftarrow bBc / \epsilon$$

$$D \leftarrow dD / \epsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \epsilon$$

$$A' \leftarrow aA' / \epsilon$$

$$B \leftarrow bBc / \epsilon$$

$$D \leftarrow dD / \epsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \varepsilon$$

$$A' \leftarrow aA' / \varepsilon$$

$$B \leftarrow bBc / \varepsilon$$

$$D \leftarrow dD / \varepsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \epsilon$$

$$A' \leftarrow aA' / \epsilon$$

$$B \leftarrow bBc / \epsilon$$

$$D \leftarrow dD / \epsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \varepsilon$$

$$A' \leftarrow aA' / \varepsilon$$

$$B \leftarrow bBc / \varepsilon$$

$$D \leftarrow dD / \varepsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR !

PEG:

$$S \leftarrow A(!c)D / A'B$$

$$A \leftarrow aAb / \varepsilon$$

$$A' \leftarrow aA' / \varepsilon$$

$$B \leftarrow bBc / \varepsilon$$

$$D \leftarrow dD / \varepsilon$$

$$a^n b^n d^* \cup a^* b^n c^n$$

PEGs EXAMPLES: OPERATOR &

& is a syntactic sugar

$$\&X = !(X)$$

- if X yields to fail then $!X$ yields to ε
- if X does not yield to fail then $\&X$ yields to ε

$$G : S \leftarrow (\&(Ac))BC \quad A \leftarrow aAb / \varepsilon \quad B \leftarrow aB / a \quad C \leftarrow bCc / \varepsilon$$

$$L(G) = \{a^n b^n c^n \mid n \geq 1\}$$

DISCUSSION

- “Concatenation” in PEGs is not a real concatenation!
 - ▶ **Conjecture:** PELs are not closed over concatenation
- PELs are closed over Boolean operations: $\Gamma_{\text{Bool}}(\text{PEL}) = \text{PEL}$
- $\text{PEL} \setminus \text{CFL} \neq \emptyset$
- *Open question:* $\text{CFL} \setminus \text{PEL} \stackrel{?}{=} \emptyset$
 - ▶ $\Omega(n^{1+\varepsilon})$ bound on CFLs parsing implies $\text{CFL} \setminus \text{PEL} \neq \emptyset$

RESULTS AND CONCLUSION

OVERVIEW OF PREVIOUS RESULTS

- PEGs is an upgrade of Top-Down Parsing Languages (TDPLs) introduced by A. Birman and J. Ullman in the 1960-s
 - ▶ $DCFL \subseteq TDPL$, $a^n b^n c^n \in TDPL$
 - ▶ Linear-time parsing algorithm, which was impractical in 60-s, because of memory overhead

OVERVIEW OF PREVIOUS RESULTS

- PEGs is an upgrade of Top-Down Parsing Languages (TDPLs) introduced by A. Birman and J. Ullman in the 1960-s
 - ▶ $\text{DCFL} \subseteq \text{TDPL}$, $a^n b^n c^n \in \text{TDPL}$
 - ▶ Linear-time parsing algorithm, which was impractical in 60-s, because of memory overhead
- B. Ford invented PEGs in 2004
 - ▶ PEGs are equivalent to TDPLs and generalized TDPLs
 - ▶ Moreover PEGs without ! operation generate PEL
 - ▶ Practical linear-time parsing algorithm for PEGs (Packrat Parsing)

OVERVIEW OF PREVIOUS RESULTS

- PEGs is an upgrade of Top-Down Parsing Languages (TDPLs) introduced by A. Birman and J. Ullman in the 1960-s
 - ▶ $DCFL \subseteq TDPL$, $a^n b^n c^n \in TDPL$
 - ▶ Linear-time parsing algorithm, which was impractical in 60-s, because of memory overhead
- B. Ford invented PEGs in 2004
 - ▶ PEGs are equivalent to TDPLs and generalized TDPLs
 - ▶ Moreover PEGs without ! operation generate PEL
 - ▶ Practical linear-time parsing algorithm for PEGs (Packrat Parsing)
- Python replaced LL-parser by PEG (PEP 617, 2020)

OVERVIEW OF PREVIOUS RESULTS

- PEGs is an upgrade of Top-Down Parsing Languages (TDPLs) introduced by A. Birman and J. Ullman in the 1960-s
 - ▶ $DCFL \subseteq TDPL$, $a^n b^n c^n \in TDPL$
 - ▶ Linear-time parsing algorithm, which was impractical in 60-s, because of memory overhead
- B. Ford invented PEGs in 2004
 - ▶ PEGs are equivalent to TDPLs and generalized TDPLs
 - ▶ Moreover PEGs without ! operation generate PEL
 - ▶ Practical linear-time parsing algorithm for PEGs (Packrat Parsing)
- Python replaced LL-parser by PEG (PEP 617, 2020)
- B. Loff, N. Moreira, and R. Reis presented the first computational model for PEGs (DLT, 2018)
 - ▶ $a^{2^n} \in PEL$ and palindromes of length 2^n in PEL
 - ▶ Structural Results: there is no pumping lemma for PEL

OUR RESULTS

- New computational model: Pushdown Pointer Automata
 - ▶ $\mathcal{L}(\text{DPPDA}) = \text{PEL}$
 - ▶ Linear-time simulation algorithm for 2-DPPDA (in RAM), modification of S. Cook algorithm for 2-DPDA
 - ▶ Clarification of PEL place among the formal languages
 - ▶ Simplicity: now the inclusion $\text{DCFL} \subseteq \text{PEL}$ is trivial
- **Thm.** $\Gamma_{\text{REG}}(\text{DCFL}) \cdot \text{PEL} = \text{PEL}$
 - ▶ **Corollary:** $\Gamma_{\text{REG}}(\text{DCFL}) \in \text{PEL} \Rightarrow \Gamma_{\text{Bool}}(\Gamma_{\text{REG}}(\text{DCFL})) \in \text{PEL} \Rightarrow \Gamma_{\text{Bool}}(\Gamma_{\text{REG}}(\text{DCFL}))$ is $O(n)$ -recognizable in RAM.
 - It is a simplification and upgrade of the previously known result: $\Gamma_{\text{REG}}(\text{DCFL})$ is $O(n)$ -recognizable [E. Bertsch and M.-J. Nederhof, SIAM J. on Comp, 1999]
- We hope that our model will raise interest to PELs in TCS community

DISCUSSION

- The relations between following models are unknown:
 - ▶ DPPDA vs 2-DPDA
 - ▶ 2-DPDA vs 2-DPPDA
 - ▶ 2-DPDA vs 2-NPDA
 - ▶ 2-NPDA vs 2-NPPDA
- It is unknown whether $\text{CFL} \stackrel{?}{\subseteq} \mathcal{L}(2\text{-DPPDA})$

News

Now practically-motivated class PEL is among these classes

Remark

Many questions for 2-NDPA from Rupak Majumdar's talk are relevant for 2-NPPDA
